The works to the hall floor following the removal of the stage and associated structures are to be carried out by the building contractor. The new floor finish is to be a commercial vinyl (wood effect in natural oak timber batten finished with clear satin seal to be wall mounted to the perimeter edges) to form a coved upstand by the floor opening. The works will include the provision of DPM and normal finishes to each wet area.

Prepare the existing wet area and install a new waterproof membrane comprising 2mm black EPDM. Rodding access to be provided at the head of each pipe for any water inclusions. The Contractor is to ensure that the waterproofing is in accordance with BS8102 and to the satisfaction of the Local Authority Building Inspector.

The existing floor is solid construction. The works to the hall floor following the removal of the stage and associated structures are to be carried out by the building contractor.
